WASHINGTON — President Biden on Thursday announced a multistep strategy aimed at rapidly shifting Americans from gas-powered internal-combustion-engine vehicles to all-electric ones — a central part of a $1 trillion infrastructure bill that would cut about one-third of the country’s pollution. He said that cars made uniquely by the United States and prevent the burning of about 200 million gallons of crude oil per week.

Mr. Biden’s plan is a long and strongly strengthening auto-industry

The plan to shift to all-electric vehicles is a central part of the Biden administration’s efforts to combat climate change. The plan includes a provision that would allow the federal government to purchase only electric vehicles, and it would increase the number of electric vehicles available for sale to consumers. The plan also includes a provision that would allow the federal government to purchase only electric vehicles, and it would increase the number of electric vehicles available for sale to consumers.
